

A User's Guide to

A product of the DC Cat Count

Necessary software and subscriptions: ArcGIS Online

Welcome to Field Equipment Location and Information Network (FELINE), the asset tracking system developed by the DC Cat Count Project for camera trapping logistic management. This document is intended to provide an overview of how to use the basic functions within the program.

Adding a potential location to FELINE via the form

1. Open your project's Public-Facing Survey Form.
2. Indicate that you are project staff and complete the form with information about the potential camera site. Do not touch the map in the form.
3. Send the data to FELINE by selecting *SUBMIT*.

Adding a potential location to FELINE manually

1. Open the FELINE application.
2. Zoom to the location where you plan to place a point.
3. Select the point type you wish to place (based on the point's status) on the left-hand side of the screen. After selecting this point, click on the screen where you wish to place the point.
4. The point will be placed without any information. Be sure to complete all the information fields.
5. The point has been added to the map. Others may need to refresh their browsers to see the point

Searching for a location or point in FELINE

1. Open the FELINE application.
2. Select the magnifying glass in the upper left-hand corner of the map.
3. Type what you are looking for in the search bar that opens. The window will populate with relevant features from the camera layer, camera host interest layer, and ESRI world geolocator.

Editing a point in FELINE

1. Open the FELINE application.
2. Zoom to a level where you can be sure you are selecting the point you wish to edit. Select the point.
3. If necessary, select “edit” at the bottom of the information window that appears from the point.
4. Adjust information for the point as needed. If the property owner denies permission to place a camera, indicate this in the status bar rather than erasing the point. This ensures that others will not continue to reach out to the same people because it appears they have not yet been contacted. When you change the status of a point its color will update automatically. Others may have to refresh their browser to see this change.

Changing the base map in FELINE

1. Open the FELINE application.
2. Select the map tile in the bottom left-hand corner of the screen. The map will change accordingly.
